**Technical Details**

**Container Stacking Loads**

**Note:** When stacking containers, the stack load is dispersed onto the base container therefore neither the individual load or the total load of the stacked containers (up to the max. stack height) should exceed the max. stack load.

**E.g** Below shows Size 5 Containers stacked to their max. of 4 high. As the max. stack load for Size 5 is 45Kg, if containers 1, 2 & 3 are equally loaded they can each carry 15Kg. If they are stacked 3 high and equally loaded each container could carry 22.5Kg, or 2 high 45Kg
